Investing in Online Education

📅 15 February 2019 ⌚ 12:00–13:15

Moderator

Alexander Molchanov

Founder, Professional Electronic Education

KEY CONCLUSIONS

Online technologies as a resource for improving quality of education

Online education helps us form a system of continuing education, and lifelong learning in our fast-paced world became a basic necessity. There are motivational components, but, first of all, this is about improving quality of education, because before uploading a course to an online platform, teacher tries to make it better and more comprehensible – [Alevtina Chernikova](#), Rector, National University of Science and Technology MISiS.

For over 20 years, Russia has been exploring online education, using different technologies, implementing it in educational organizations in various ways. But this system could not remain hidden, sooner or later the state should look into the development of online education and launch large-scale serious projects – [Alexander Molchanov](#), Founder, Professional Electronic Education.

When I am hearing about the competition between online and offline, between Russian and foreign projects and other things, I am asking myself a question <...> Why does the school forbid the child to use their mobile phone? Why can't it capture their attention in any other way? Because if it stops doing it, the child would disconnect from what is going on around them – [Aleksandr Laryanovskiy](#), Business Development Director, Managing Partner, Skyeng.

Investment into online education is growing

The market of online education is an order less than the offline market, but it is growing two or three times faster, it is a global trend, and Russia is following it. Despite the absence of any special programmes or benefits, investments keep coming in –

Konstantin Parshin, Vice President and IT cluster CEO, Skolkovo Foundation .

Unified educational online platform increases demand for the programmes

Among the goals of the project, most importantly, was the creation of Russian single-window system that would unify all online platforms – at that moment we already had around 30 of them. And now 30 out of 31 platforms operating in Russia are single-window based. Moreover, a system for quality assessment of online courses has been developed, as well as for assessment of student personality intensification, and also a system for training and retraining of teachers has been created – Alevtina Chernikova, Rector, National University of Science and Technology MISiS.

Green Financing: Developing the Responsible Investment Market

📅 15 February 2019 ⌚ 12:00–13:15

Moderator

Rashid Ismailov

Head of the Working Group on Ecology, Expert Council under the Government of the Russian Federation; Head, Russian Ecology Society

KEY CONCLUSIONS

Support for green and socially responsible investment is becoming a global trend

The market of 'green' stock has already reached USD 390 billion. <...> Each global centre has a section of 'green' stock. <...> In Luxembourg a separate 'green' stock exchange has been established. The world has been living with 'green' stock for a while – Ilya Torosov, Deputy Minister of Economic Development of the Russian Federation.

We are now at the growth point when we have to set a clear priority. <...> As an ecologist, I believe that all investments should be 'green', they should be responsible. I think that this alternative understanding of investment is a global trend – Rashid Ismailov, Head of the Working Group on Ecology, Expert Council under the Government of the Russian Federation; Head, Russian Ecology Society.

The state and various public agencies should support such projects, because they help either develop the social sector or improve country's ecology – Anna Kuznetsova, Member of the Executive Board, Managing Director of Securities Market, Moscow Exchange.

Russia puts an emphasis on the implementation of clean technologies

The national project ('Ecology' – Ed.) [includes] the transition to best available technologies. There has been a long discussion about whether to identify it as a separate area or not. It has sent a very important message that the transition to best available technologies, that is, to a large-scale environmental reform, should be closely related to the development of green finance instruments. Fifty-one reference guides on best available technologies has already been prepared – [Vasily Osmakov](#), Deputy Minister of Industry and Trade of the Russian Federation.

Sustainable development projects are interesting for the business

Our company is undoubtedly interested in development and implementation of instruments of sustainable development financing and 'green' financing. We support the growth of 'green' finance market and 'green' stock in Russia, we are already having this dialogue and are willing to continue – [Alexey Voronov](#), Finance Director, Member of the Management Board, Management Company METALLOINVEST.

The existing mechanism of state support is successfully used for project financing by banks. Particularly, development banks are financing 'green' energy projects due to their capabilities – [Alexander Gareev](#), Managing Director, Eurasian Development Bank (EDB).

Developing the Market for Gas as a Motor Fuel: New Opportunities for Regions and Investors

📅 14 February 2019 ⌚ 14:30–15:45

Moderator

Irina Zhachkina

Member of the Board, First Deputy Chairman of the Board, Russian Agricultural Bank

KEY CONCLUSIONS

Developing market for gas as a motor fuel being Russia's objective

We intend to increase the amount (of gas as a motor fuel consumption – ed.) from 0.6 billion cubic metres of gas to 10.5 billion cubic metres in the next 15 years. We are talking about forming a new market, creating infrastructure, about investments inflow. Our estimations show that we can create

an order for mechanical engineering enterprises till 2030 – the demand for equipment amounts to over 2 trillion roubles – [Anton Inyutsyn](#), Deputy Minister of Energy of the Russian Federation.

Both producers and users of gas-engine equipment were provided with 20 billion roubles of support measures from 2014 to 2018. We provide a concessional auto loan system for individuals, while concessional leases are more suitable for business – [Denis Pak](#), Director of the Department of the Automotive Industry and Railway Engineering, Ministry of Industry and Trade of Russian Federation.

Environment and ecology are the two pillars [the condition of] which we can improve by developing the market for gas as a motor fuel. The synergy effect produced by the effort of the government, regions and business will help accelerate [this process] – [Irina Zhachkina](#), Member of the Board, First Deputy Chairman of the Board, Russian Agricultural Bank.

Consumers and manufacturers interested in gas engine equipment

Gas as a motor fuel is not the fuel of the future, its time has come. The equipment has proved to be viable, the infrastructure in the pilot regions is already well-developed, the consumers can already see the cost-effectiveness in practice. A freight truck allows an annual saving of 750 roubles – [Evgeniy Pronin](#), Director for Gas Engineering Equipment, KAMAZ.

We are facing a big challenge – transferring the fleet to gas as a motor fuel – [Sergey Khramagin](#), Chief Executive Officer, State Transport Leasing Company.

We produce gas-engine equivalents of all KAMAZ diesel-based vehicles, it is over 120 models – [Evgeniy Pronin](#), Director for Gas Engineering Equipment, KAMAZ.
